You may be interested to know that there is to be a lunar eclipse early in the morning of 17th August. It will begin at 2.23 am (heure d'été) and finish at 7.45 am, with the maximum eclipse occurring at about 5.10 am.

We hope you have been able to build the prototype 'Collecteur lunaire', and that you will be able to experiment with it this week. We would remind you that this is the last time our design can be used before May next year, as the altitude of the moon is greater than 40 degrees in the winter months.

Let us know how you get on.

Yours sincerely

Andrew McDowell
