Transmission time

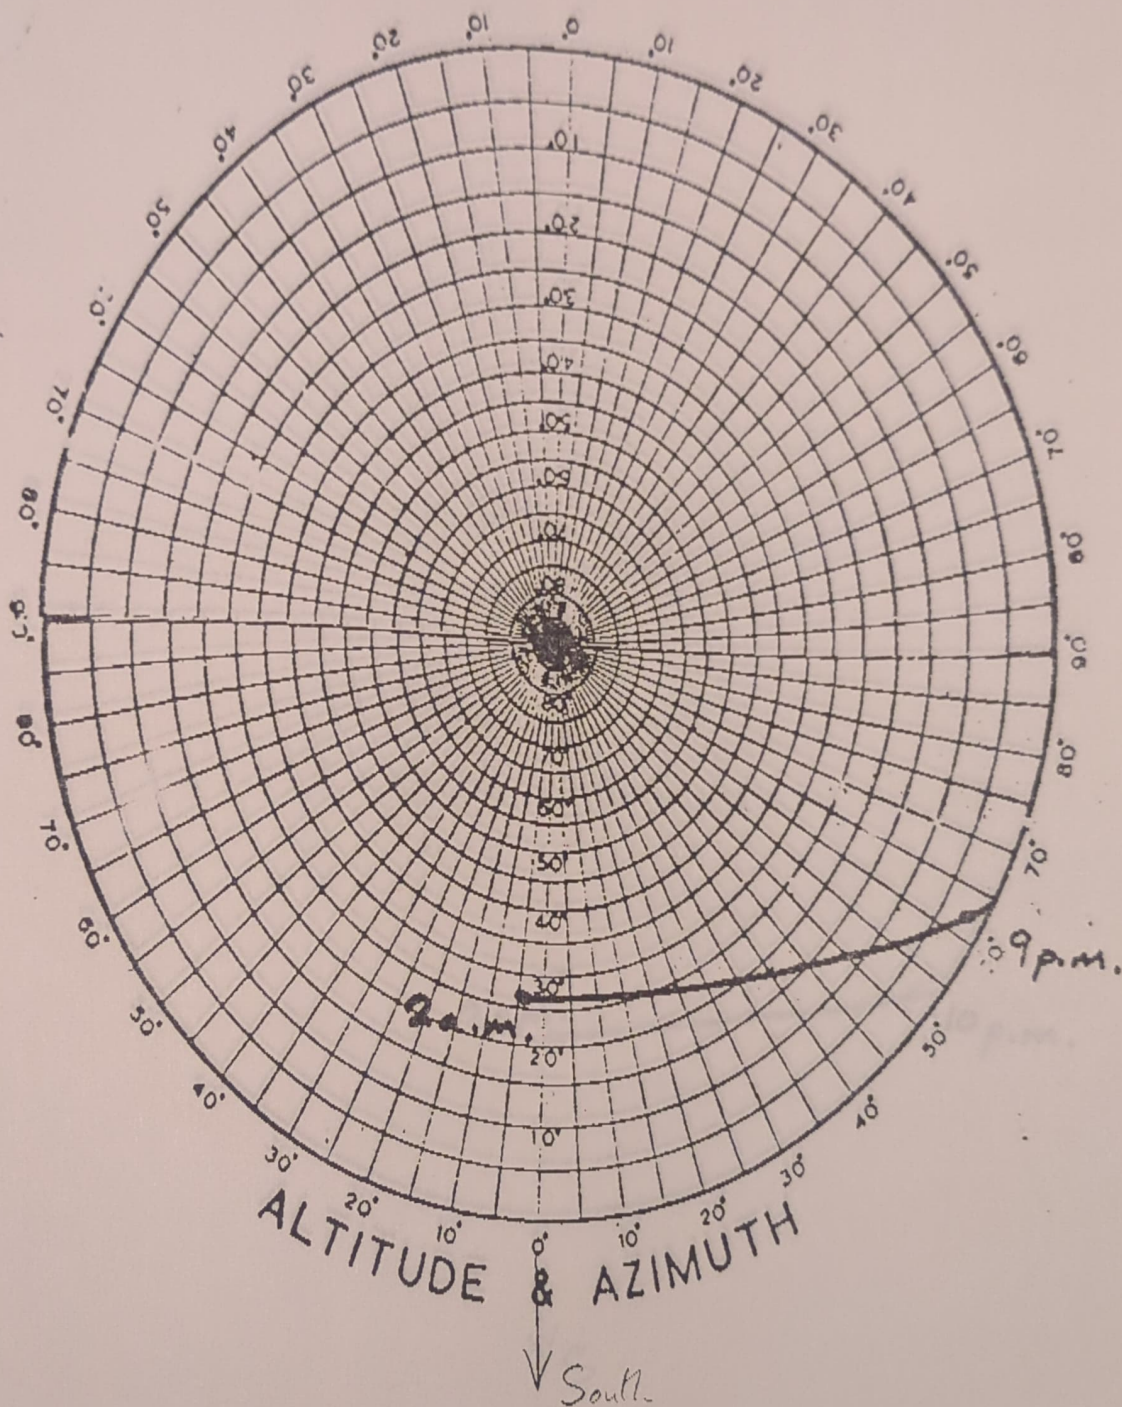

Andrew Sedgwick asked me to send you the following "moon path diagrams." From them you can read the altitude and azimuth of the moon between 9pm and 2am local time at Gargoubes. The altitudes (read from the concentric circles) are measured from the horizontal. The azimuths at these times are between 0° and 80° East of South.

I hope this is what you require - please contact me for further details or clarification.

Regards,

Andrew
