Attention Peter Rice
RFR/ Fax N°: 40 09 83 38

5 Pages

Dear Peter,
Here is the required informations for PENN.

Map :

I suggest you get directly in Paris the Map corresponding to the area.
You can get it either at FNAC Library or directly at the IGN 107 rue la Boétie,
it will be more secure than if I send it to you .

The MAP is :
Carte Topographique 1: 25000 (4cm for 1 km)
N° 2742 Ouest : St Martin de Londres

You could also get the Geological Map (1/50000) same name N° 963

Gourgoubès is easy to find with the coordinates that they have in the file.
(3°39' East/43°51 North)

///Following is the cadastral map of the property . I have indicated the
pilgrim path wich roughly follows the " chemin de service " under the Mas,
as well as the site of the TFM.(Theater of Full Moon)///

My camera being Kaput, I cannot make a copy of the aerial photo, I will send
a slide directly there as soon as it is fixed.

Also please find a copy of the facture d'honoraire I am sending RFR as we
had agree with copy of all the materials and works I sent to Andrew
concerning the study for the lighting system.It would be greatly appreciated
if you could pay it fast ! Merci d'avance.

Dominique said she would contact you by phone today or tomorrow. I am
still working on the french translation that I will fax to London before you go
back to PENN. We have to come up with some kind of a budget for the
building and experimenting of the system this summer. Please send any
elements you find necessary to integrate in the budget.

A bientôt on the phone

Example of Schedule for a summer day at the Gourgoubès Center

Mix schedule adaptable for :
Theater or Danse Company
Students Workshop
Research Seminars
Tests and Rehearsals programme

8:30am :	breakfast
9am/11am :	group activity technical and stage rehearsal in the Theater physical training/outside morning lecture/Music Salon or Outside laboratory/ Studio
11am/1pm:	free time personnal work/readings and writings swimming pool/gardening/music/photos etc...
1pm/2pm :	lunch time by the pool house
2pm/3pm :	free time/ afternoon nap/siesta
3pm/6pm :	workshops afternoon lectures debate or group experiment sitting rehearsal conference
6pm/7 pm :	swimming pool / physical exercises
7pm/8 pm :	professional training acting/singing/dancing/music playing etc... technical set up for evening rehearsal
8:30/9:30 pm :	dinner at the Mas
10pm/2am :	Theater: Group Rehearsals Lighting rehearsals Concerts Performances
2am/4am:	possibility of lighting rehearsals astronomical observation

** The possibilities of having various main axis of light beams are very suitable. For ballet side lighting is almost a necessity .

-The wings of the TPL could be equipped with rectangular mirrors collecting moonlight either from the main frontal collector, or directly from the moon . To have a portion of a cylinder (2/3m) set vertically could theoretically give a rectangular surface of light on stage .

-They could be set up as " set's wings" themselves , determinating the various stage plans of various performances. The use of collectors hidden inside the stage sets (close up light) should be explored.

* It would be interesting to have a graphic showing the variations of the surface of a light beam on the stage from a spheric collector, a rectangular one etc... according to their vertical and horizontal combined positions and movement !

* I propose we use (as a working title) : " Photismes " as the name of a first show that would have the light and the colors as the "dramatis personae" . From the experiment in Odeillo , it is confirmed that playing with the subtleties of colors will be more than likely a very attractive original piece .

* Gourgoubès start to have quite an interesting library on the Moon in astronomy, mythology, poetry etc...

* I will send you some proposition of plannings, it would be nice if we could match the moon calendar in the late spring, so we can secure at least 2 projects on the 3 programmed : **Picasso, Photismes , Galilée Kepler Newton** , (working titles).

Most of the full moons are towards the end of each month this year ,
Do you think we could match a basic calendar being :

- first tests on site	26 / 27 / 28 / 29 of April
- tests and operations	24/25/26/27/28/29/30 of May
- operations	22/23/24/25/26/27/28 of June
- operations	22/23/24/25/26/27/28 of July
- operations	18/19/20/21/22/23/24 of September

It seems difficult to get the complete budget for the study and the financing of the first serie of prototypes soon enough to be ready in March. Even April might be tough to obtain. I plan to include in each project's budget a fee for financing the equipment.

Best wishes to all of your family for 1991, I cross my fingers for our project to get achieved with satisfaction !
Your two daughters are perfect guests ! They are welcome here anytime!

Dans l'attente de tes nouvelles , amitiés de Gourgoubès
